- Following clients' relationships
- Thinking about digitalisation and IT risks
- Proposing IT specifications on new activities, new deals or new regulations, delivering these specifications to IT developing team
- Controlling new versions and testing results on-the-job
- Dealing with reporting duties both for the clients and the firm.
- Participating to functional transversal meeting and finding new digital solutions with managers
- It is likely that the role will also include responsibility for the provision of professional training programmes and related administrative tasks.

**PROFILE:**

- Ideally an engineering degree from the British system or from the French system
- Financial mathematics expertise,
- Knowledge of financial markets and Greeks
- Experience of Digital Project on the functional side
- Expertise in IT methods
- Excellent interpersonal and communication skills, both oral and written in English
- Excellent organisation and planning skills
- A keen ability to resolve issues and meet tight deadlines

**SALARY:**

£60k-£65k according to experience
