The IS Technical Architect will report to the Technical Director.

ROLE:

- Analysis of current systems, mapping process and services of the information system
- Designing of technical solution
- Project evaluation for stakeholders including costs and risk/benefit analyses
- Project management and delivery of projects and business change, supporting and co-ordinating project resources in making the recommended changes, including helping to resolve any issues.
- Providing regular reporting to management committees and groups.
- Leading investigations into business processes, functions, information flows and data structures.
- Providing an interface between the customer and company technology, helping to articulate business problems in formal business and functional requirements.
- Helping to quality assure and test solutions and products.
- Proactively promoting and maintaining high standards work
- Participating in the design, testing, implementation, modifications, documentations of systems, applications and infrastructure.
- Managing and integrating interfaces between different systems
- Ensuring the accuracy of data in all systems
- Delivering specifications using agreed standards and tools, to achieve a well-engineered result
- Effectively and efficiently meet business needs and objectives

PROFILE:

- Demonstrable working knowledge of IT Systems and Technology, good knowledge of ERP will be ideal
- Extensive experience across IT business analysis and project management
- Experience using both Agile and Waterfall approaches to projects
- Prince2 Foundation and Prince2 Practitioner Preferred
- Ability to communicate with both technical and non-technical parties with strong written and verbal communication
- Analytical problem-solving skills
- An ability to translate complexity into simplicity and to work in a team structure
- Ability to manage multiple projects across different business units and functions
- Willing to take responsibility and ownership for tasks.

SALARY:

Between £40k and £50k according to skills and experience + benefits
